

## VIOSO Presenter – Pimp your Presentation

### Mixed Media Show by Drag & Drop

You're probably familiar with this situation: Many different types of content such as PowerPoint presentations, images and videos have to be shown in sequence – without having to switch between various programmes. A difficult task – but VIOSO can help you with its new VIOSO Presenter software. Simply compile your various content into a diversified mixed media show by drag & drop. Using various programmes becomes superfluous. Playback from connected devices such as TV cards or cameras is also supported.

### Enhance Your Presentations

The highlight: The **VIOSO Presenter** automatically enhances your presentations with fascinating 3D effects where desired. For example, your PowerPoint slides rotate like a top or float on a background selected by you. Configuration is straightforward and does not require any changes to the source material. Last-minute adjustments can also be integrated into the presentation within seconds.

Feel confident during your presentation: **VIOSO Presenter** offers comprehensive support for the use of projectors and displays; the software regulates the colours, contrast and resolution. **VIOSO Presenter** can even adjust a tilted image of a projector from the comfort of your PC.

### Download the Free Version

You and your audience can see the convincing features of **VIOSO Presenter** for yourself. The **VIOSO Presenter Free** is available as a free download at [www.vioso.com](http://www.vioso.com). This free version allows you to arrange PowerPoint slides, images or videos, select from a set of standard background images and control all types of displays and projectors.

If you want to use your own background images, save and load configurations and settings as well as arranging an unlimited number of slides, images or videos, the full version is available for just EUR 69.00.

### VIOSO Presenter Pro for Demanding Users

**VIOSO Presenter Pro** was developed especially for professional use. It allows you to project onto surfaces that are not flat, for example a cyclorama, cylinder or sphere. Thanks to patented “smartprojecting technology”, you can even transform unusual backgrounds such as the wall of a building, façade or rock face into a projection screen with the help of a digital video camera. The seamless integration of these processes into existing video and presentation applications is remarkable. You can download a demo version of **VIOSO Presenter Pro** under [www.vioso.com](http://www.vioso.com).

Make your presentations more innovative and striking – present with confidence.

**VIOSO – it's your show**
